

Compliance @ Speed Part 3 The Finale - 23rd June, 2021

9:30am - 1pm (British Summer Time)

Join the Microsoft Protectors for Part III at Speed. A 3.5 hour event, where we will build on what you learnt in Part I. More Compliance Platform demos across Microsoft 365 and Azure including:

eDiscovery, Azure Sentinel, Conditional Access, AIP Scanner, more Power Platform integrations+ API Intergrations

Graham Hosking

Leon Butler

Dan Cousineau

Ally Turnbull

Angelos Angelides

Meet the Team!

Housekeeping

There will be breaks & speaker changes throughout

This will be recorded and links sent within 7 days

These Resources will be shared with you (to share with others at your company)

This is a one way speaker to attendees audio, so please ask any questions in the Q&A

Feedback –
aka.ms/complianceatspeedfeed

All content is under your partnership NDA

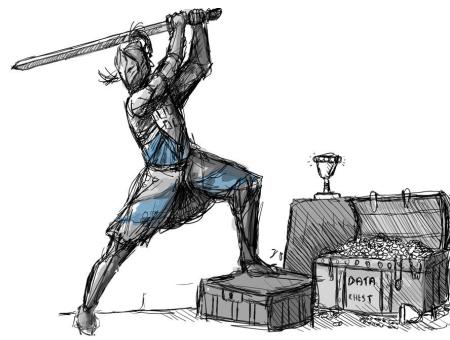

In case you missed parts 1 & 2

- **On-Demand Recordings -**
 - <https://aka.ms/complianceatspeed-reg>
 - <https://aka.ms/complianceatspeed2-reg>
- **Slides - <https://aka.ms/complianceatspeed-repo>**

Agenda (UK GMT)

09:30 - Intro and Housekeeping – Ally Turnbull

09:40 - Opening Keynote - Dan Cousineau

09:50 - Know your data Scale of the Problem – Leon Butler

10:10 - Sentinel and IRM – Leon Butler

10:40 - **Break 10 mins**

10:50 – eDiscovery – Graham Hosking

11:25 – PowerBi – Ally and Angelos

11:50 - **Break 10 mins**

12:00 – Conditional Access – Graham/Leon

12:25 - Build a practice - Ally

12:50 – Wrap Up

13:00 – Event ends

FY22 Sales Plays – Security (Security, Compliance, Identity + Management)

| Business Objectives | # | Sales Plays | Sales Plays Summary | Hero Product |
|---|----|--|--|------------------------------------|
| Security (SCI-M) Expand Existing Expanding \$ per customer with premium solutions in M365 and cross selling Azure Acquire New Grow new SCI-M customers Dream Big Reach untapped opportunities | 1. | Build Zero Trust foundations | Drive upsell (O to M) with foundational zero trust capabilities in EMS. Increase 3 rd party app usage on AAD as cross-cloud identity platform and Microsoft-managed cross-platform endpoints. Azure Active Directory/MEM | AAD MEM |
| | 2. | Modernize security and defend against threats | Drive Microsoft Defender (M365 & Azure Defender) for end-to-end security with Sentinel as SIEM to modernize security operation center. Microsoft Defender/Azure Sentinel | Microsoft Defender, Sentinel |
| | 3. | Secure Azure, hybrid & multi-cloud <small>New</small> | Attach Security to Azure infrastructure and secure hybrid and multi-cloud Azure Defender/Azure Network Security/MCAS | Azure Defender, Network Security |
| | 4. | Protect and govern sensitive data <small>New</small> | Drive information protection, data loss prevention and governance in E5 compliance to help customers manage their sensitive data E5 Compliance/Azure Purview | Microsoft IP+G, DLP, Azure Purview |
| | 5. | Manage and investigate risks <small>New</small> | Help customers identify and mitigate internal risks and manage compliance E5 Compliance/Compliance Manager | Insider risk, Advanced eDiscovery |

Microsoft Inspire

Register today

14th – 15th July, 2021

What is Microsoft Inspire?

Microsoft Inspire is where our partners from around the world unite to create and strengthen connections, build their business, empower possibilities and celebrate together. It is our opportunity to discuss strategy, innovation, differentiation, growth and how we can best serve customers together with inclusion and resilience

Thank you

Knowing your data

Discovering and managing data is challenging

#1

Protecting and governing sensitive data is biggest concern in complying with regulations³

>80%

of corporate data is “dark” – it’s not classified, protected or governed²

88%

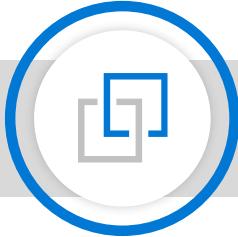

of organizations no longer have confidence to detect and prevent loss of sensitive data¹

1. Forrester. Security Concerns, Approaches and Technology Adoption. December 2018

2. IBM. Future of Cognitive Computing. November 2015

3. Microsoft GDPR research, 2017

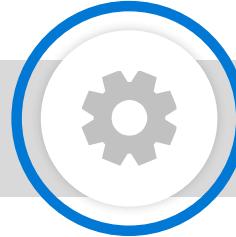

Our unique approach

Integrated
into user apps

Rich & Intelligent
classification

Extensible
to other systems

Unified
management

User-centered
balances security
with productivity

Discover and protect your data across all environments

On-prem

Classify and label data in on-prem repositories

Microsoft 365 Apps Across Platforms

Label and protect Office files natively across Windows, Mac, iOS, Android and Web Clients

SharePoint Sites Teams, Microsoft 365 Groups

Label and protect sensitive SharePoint Sites, Teams, Office 365 Groups, PowerBI artifacts

Exchange Online

Automatically label and protect sensitive emails in Exchange Online

SharePoint Online

Automatically label and protect sensitive files in SharePoint Online and OneDrive for Business

Non-Microsoft Clouds and SaaS apps

Extend protection through Microsoft Cloud App Security to third party clouds and SaaS apps

Unified Management in Microsoft 365 compliance center

Microsoft Information Protection

Protect and govern data
– **wherever** it lives

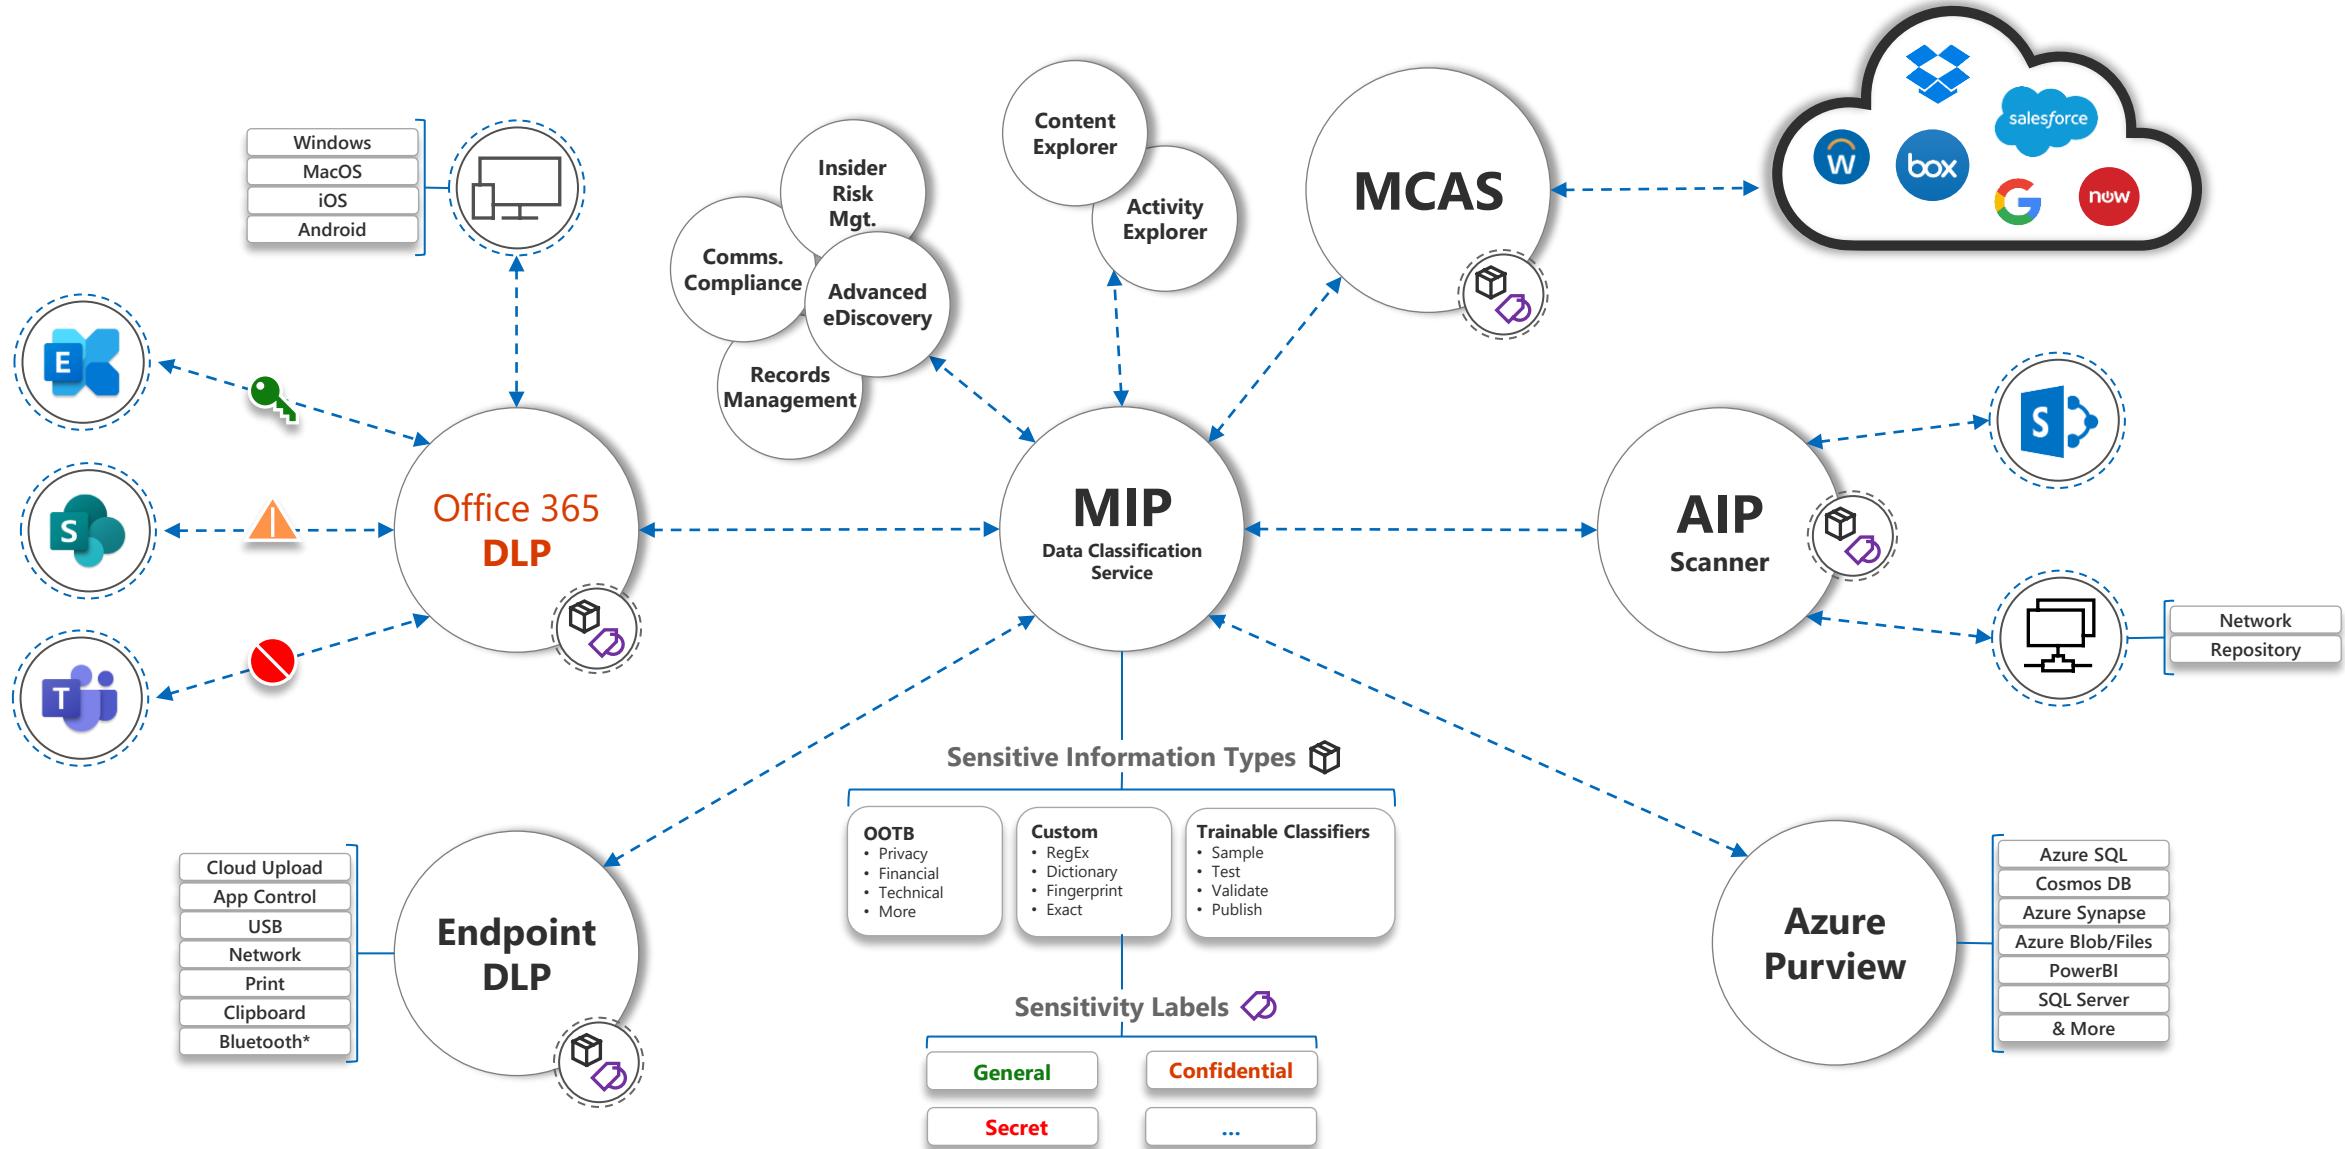

Understand your data landscape and identify important data across your hybrid environment

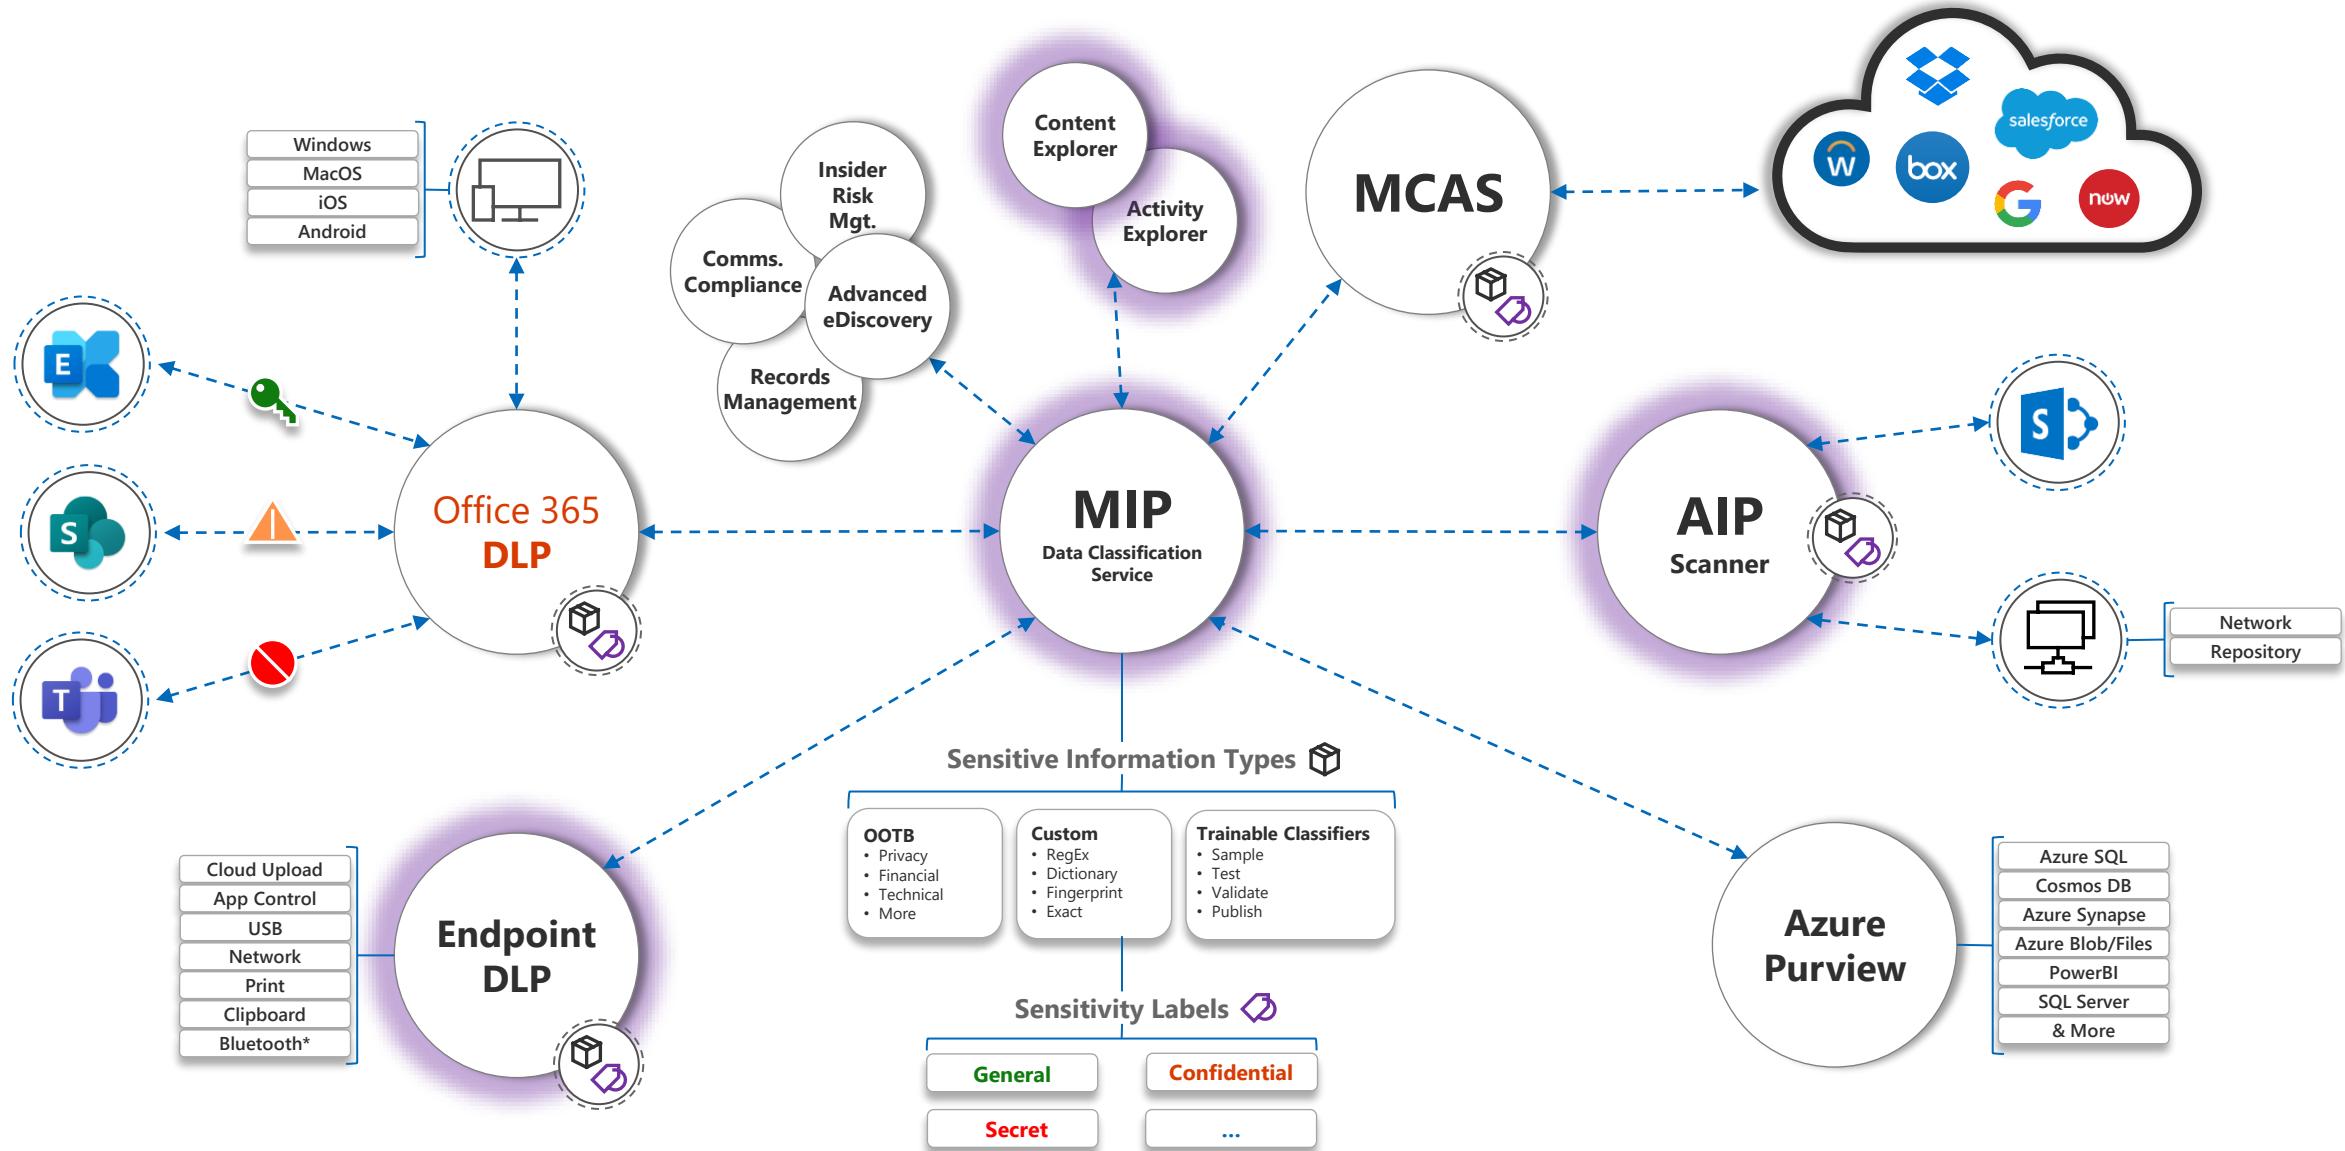

Powered by an intelligent platform

Unified approach to automatic data classification, policy management, analytics and APIs

[Labels](#) [Label policies](#) [Auto-labeling](#) [Remove from navigation](#)

Sensitivity labels are used to classify email messages, documents, sites, and more. When a label is applied (automatically or by the user), the content or site is protected based on the settings you choose. For example, you can create labels that encrypt files, add content marking, and control user access to specific sites. [Learn more about sensitivity labels](#)

Edit sensitivity label

Auto-labeling for files and emails

Since encryption is turned on, a large amount of content might be automatically encrypted when this label is applied. Turning on encryption impacts Office files (Word, PowerPoint, Excel) that have this label applied. Because the files will be encrypted for security reasons, performance will be slow when the files are opened or saved, and some SharePoint and OneDrive features will be limited or unavailable. Sensitive info type

Confidence level reflects how much supporting evidence is detected in addition to the primary element. The more supporting evidence an item contains, the higher the confidence that a matched item contains the sensitive info you're looking for. [Learn more](#)

Azure Sentinel: Insider Risk Management

Key capabilities

Collect and analyze security data across your enterprise

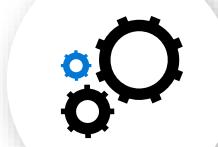

Detect malicious activity using threat intelligence and AI

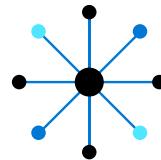

Investigate threats with an interactive attack graph

Respond quickly and automate security workflows

Proactive Hunting using the SOC tools of choice

Collect and analyze security data across your enterprise

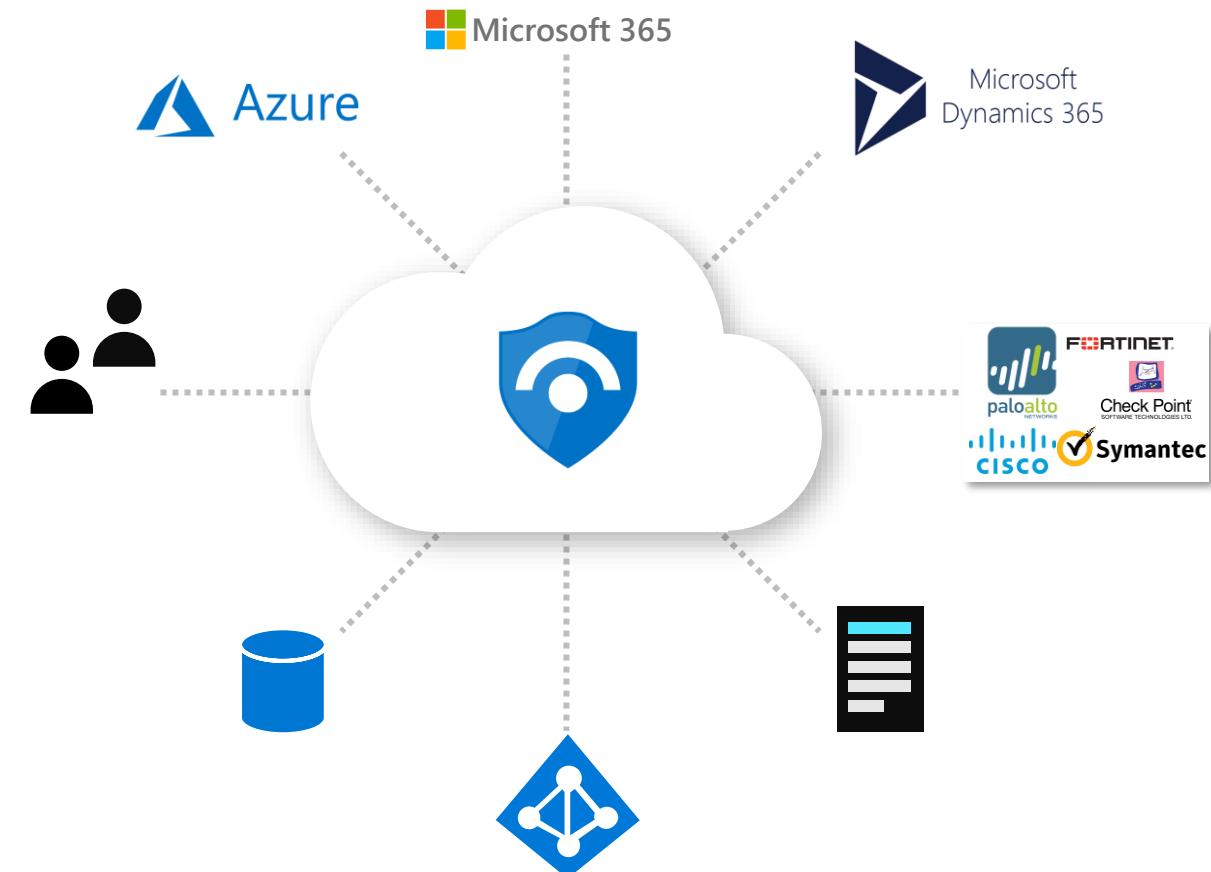

Native integration with Microsoft solutions

Connectors for partner solutions

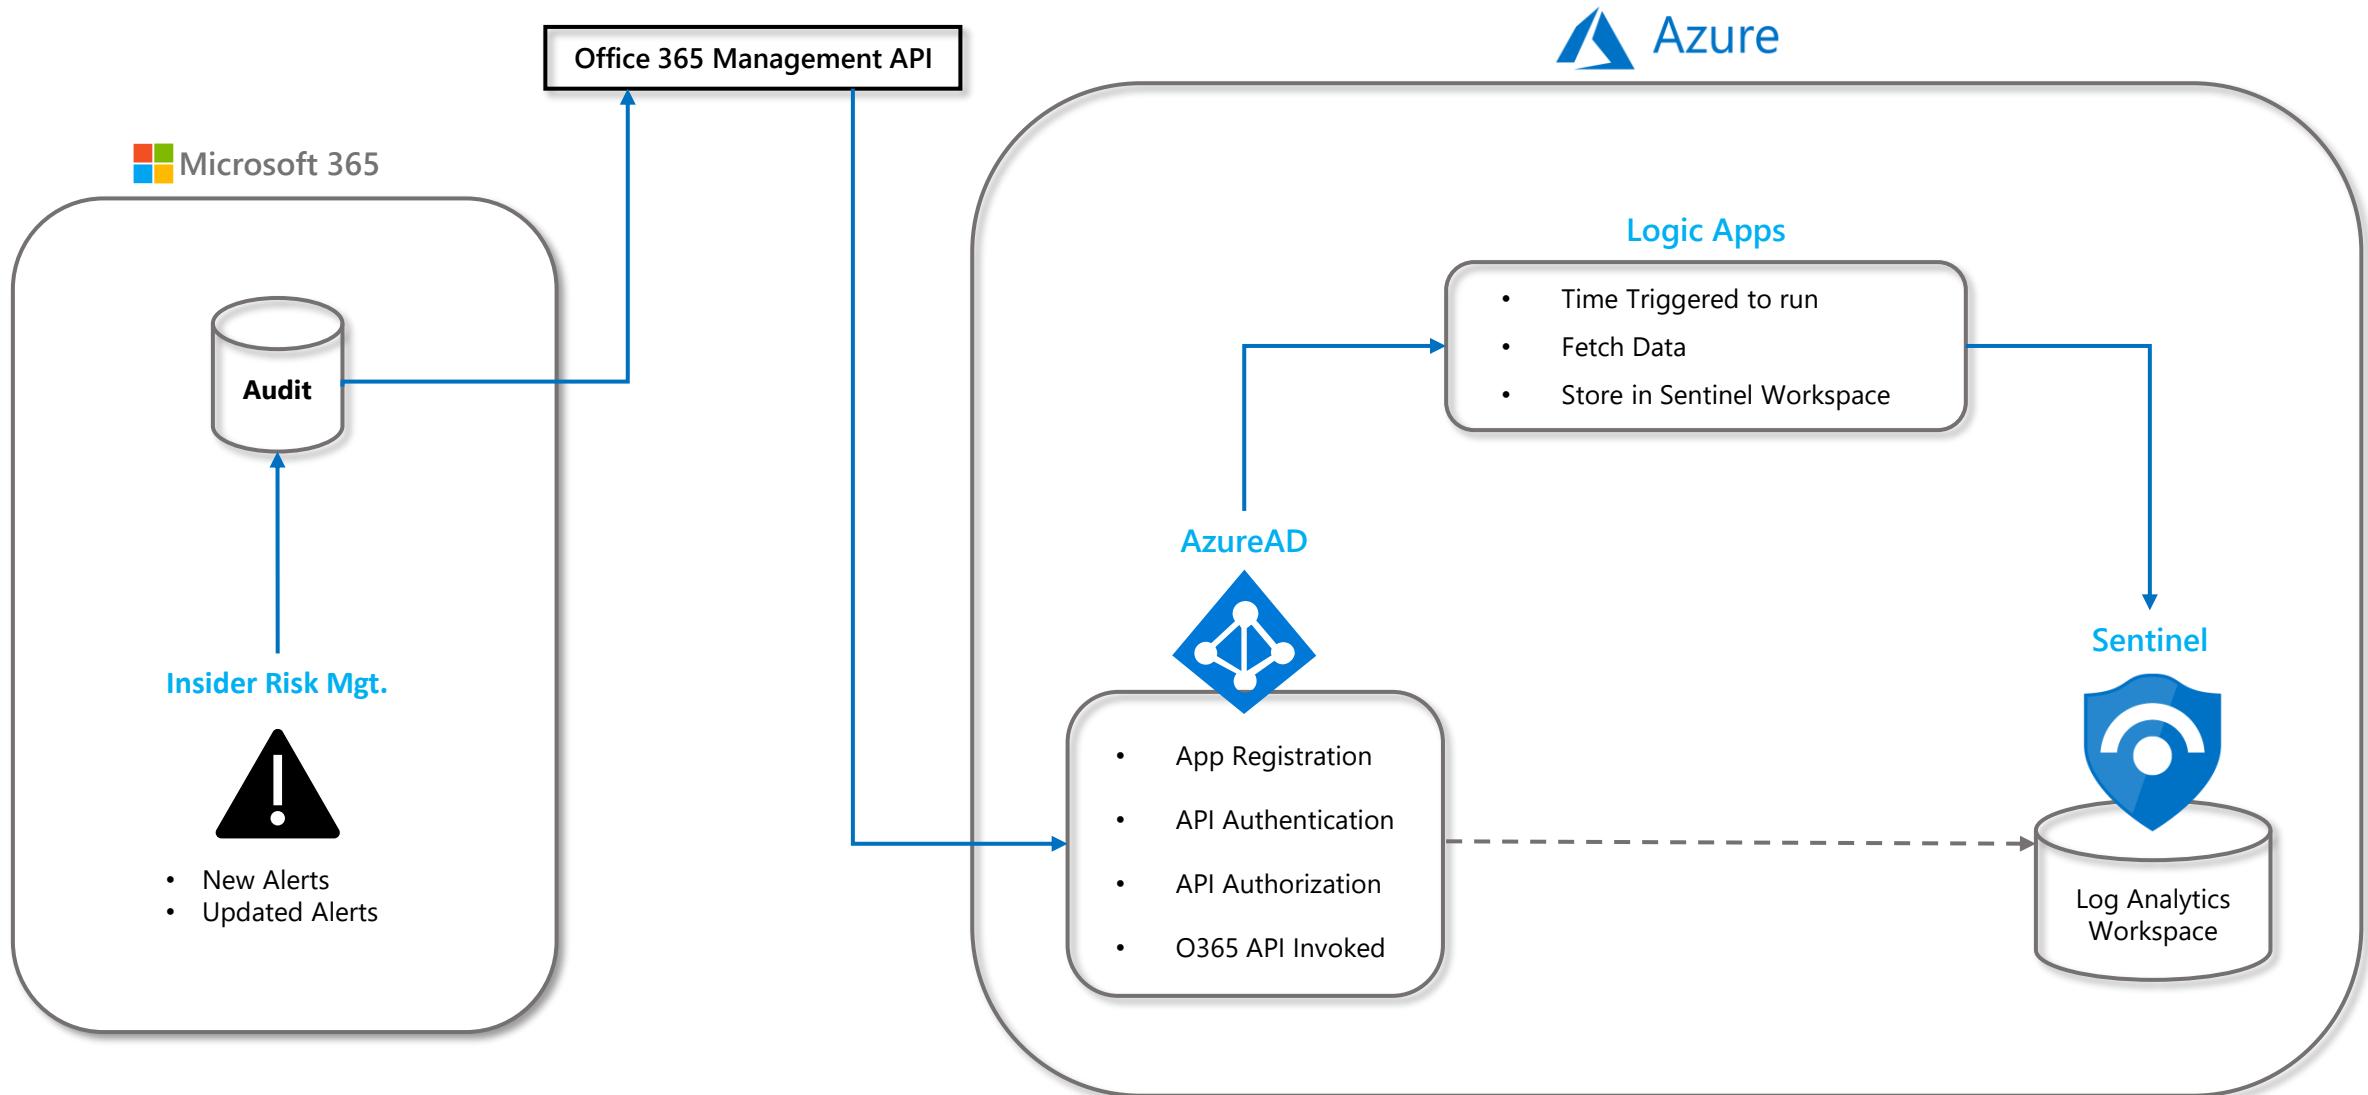

Supports standard log formats for other sources

Dashboards offer instant visibility and insights

Proven log platform with **tens of petabytes** of daily ingestion

Alert Flow: Insider Risk Management

Get Started Documentation

Build your application with the Microsoft identity platform

The Microsoft identity platform is an authentication service, open-source libraries, and application management tools. You can create modern, standards-based authentication solutions, access and protect APIs, and add sign-in for your users and customers. [Learn more](#)

Call APIs

Build more powerful apps with rich user and business data from Microsoft services and your own company's data sources.

[View API permissions](#)

Sign in users in 5 minutes

Use our SDKs to sign in users and call APIs in a few steps. Use the quickstarts to start a web app, mobile app, SPA, or daemon app.

[View all quickstart guides](#)

Configure for your organization

Assign users and groups, apply conditional access policies, configure single sign-on, and more in Enterprise applications.

[Go to Enterprise applications](#)

DLP | Certificates & secrets

Search (Ctrl+)/ Got feedback?

Credentials enable confidential applications to identify themselves to the authentication service when receiving tokens at a web addressable location (using an HTTPS scheme). For a higher level of assurance, we recommend using a certificate (instead of a client secret) as a credential.

Certificates

Certificates can be used as secrets to prove the application's identity when requesting a token. Also can be referred to as public keys.

Upload certificate

| Thumbprint | Start date | Expires | Certificate ID |
|---|------------|---------|----------------|
| No certificates have been added for this application. | | | |

Client secrets

A secret string that the application uses to prove its identity when requesting a token. Also can be referred to as application password.

New client secret

| Description | Expires | Value | Secret ID |

100%

The screenshot shows a Logic App workflow with three main steps:

- Recurrence:** Set to trigger every 1 Day.
- Initialize variable:** Creates a variable named "AuditGeneral" of type String with the value: `https://manage.office.com/api/v1.0/2006d214-5f91-4166-8d92-95f5e3ad9ec6/activity/feed/subscriptions/content?contentType=Audit.General&PublisherIdentifier=Microsoft`
- HTTP:** Makes a GET request to the URI `{x} AuditGeneral`. The Headers section includes Accept: application/json and Content-Type: application/json. The Body section is empty.

100%

The screenshot shows the Logic Apps Designer interface with an active workflow. The top section displays an **HTTP** trigger configuration. The **Method** is set to **GET**, and the **URI** is **{x} AuditGeneral**. The **Headers** section includes **Accept: application/json** and **Content-Type: application/json**. The **Authentication** section is expanded, showing **Active Directory OAuth** selected as the type, and fields for **Authority** (with placeholder **Enter authority**) and **Tenant**, **Audience**, **Client ID**, **Credential Type**, and **Secret**. Below the trigger is a **Parse JSON** action. The **Content** field is set to **Body**.

```

Use sample payload to generate schema

For each

*Select an output from previous steps Body

HTTP 2

Connections

Add an action

100%

The screenshot shows a Logic Apps Designer workflow. It begins with a 'Parse JSON' action, which has 'Content' set to 'Body'. Below it is a 'Schema' section containing JSON code:

```
}, "contentUri": { "type": "string" }, "required": [ "contentUri", "contentId", "contentType", "contentVersion" ]
```

Below the schema is a link 'Use sample payload to generate schema'. This is followed by a 'For each' loop action. Inside the loop, the 'Select an output from previous steps' dropdown is set to 'Body'. The loop then contains an 'HTTP 2' action and a 'Connections' action. A warning icon is present next to the 'Connections' action. At the bottom of the loop, there is a button 'Add an action'.

Insider Risk Management - New Alert Triggered (High)

High Severity Enabled Status

ID: 47f76b1e-f360-43dd-b8bf-d566e12768d8

Description:

Tactics:

- Collection
- Exfiltration

Rule query:

```
Compliance_IRM_AuditGeneral_CL  
| where RecordType_d == "40"  
| where Category == "InsiderRiskManagement"  
| where Severity_s == "High"  
| where Operation_s == "AlertTriggered"  
| project TimeGenerated, AlertType_s, Category, Operation_s
```

Rule frequency: Run query every 5 minutes

Rule period: Last 5 minutes data

Rule threshold: Trigger alert if query returns more than 0 results

Define the logic for your new analytics rule.

Rule query

Any time details set here will be within the scope defined below in the Query scheduling fields.

⚠ One or more entity mappings have been defined under the new version of Entity Mappings. These will not appear in the query code. Any entity mappings defined in the query code will be disregarded.

```
Compliance_IRM_AuditGeneral_CL
| where RecordType_d == "40"
| where Category == "InsiderRiskManagement"
| where Severity_s == "High"
| where Operation_s == "AlertTriggered"
| project TimeGenerated, AlertType_s, Category, Comments_s, parse_json(Data_s).userPrincipalName, Name_s, Severity_s, Source_s,
```

[View query results >](#)

Results simulation

This chart shows the results of the last 50 evaluations of the defined analytics rule. Click a point on the chart to display the raw events for that point in time.

⊕ Test with current data

Alert enrichment (Preview)

Entity mapping

Map up to five entities recognized by Azure Sentinel from the appropriate fields available in your query results. This enables Azure Sentinel to recognize and classify the data in these fields for further analysis. For each entity, you can define up to three identifiers, which are attributes of the entity that help identify the entity as unique. [Learn more >](#)

i Unlike the previous version of entity mapping, the mappings defined below **do not** appear in the query code. Any mapping you define below will replace **not only** its parallel old mapping in the query code, but **any** mappings defined in the query code – though they still appear, they will be disregarded when the query runs. [Learn more >](#)

6 years ago...

The screenshot shows the Microsoft eDiscovery interface. At the top, there are tabs: 'Exit case', 'Prepare', 'Relevance', 'Export', 'Reports', and 'Express analysis' (which is highlighted). Below the tabs, a breadcrumb navigation shows: 'en Investigation > Express analysis > Setup'. On the right, there's a user profile icon for 'Rajesh Jha - Executive Vice President, Office Product Group'. The main content area is titled 'Process container' and lists several completed tasks:

| Date created | Title | Description | Added to case | Pre-processing |
|-----------------------|-------------------|-------------|-----------------------|------------------------|
| Sep 28 2016, 09:30 AM | Cheat Only | | Sep 28 2016, 05:10 AM | Completed successfully |
| Sep 28 2016, 09:56 AM | Sample For Export | | Sep 28 2016, 09:24 AM | Completed successfully |
| Sep 28 2016, 09:56 AM | 0726 | | Sep 28 2016, 09:12 AM | Completed successfully |
| Aug 23 2016, 10:55 PM | Demo 0718 | | | Completed successfully |
| Jul 21 2016, 07:35 PM | Test 0713C | | | Completed successfully |
| Jun 29 2016, 09:22 PM | Demo 20160629 | | | Completed successfully |

Below the table, it says 'Showing 6 of 6 results'. Under 'Analyze parameters', there are two checked checkboxes: 'Calculate near-duplicates and email threads' and 'Calculate themes'. Under 'Export destination', there are three options: 'Export batch: Export batch 02' (checked), 'Download to local machine' (checked), and 'Export to user-defined Azure Blob' (unchecked). There are also fields for 'Container (URL)' and 'SAS token', with a note 'Save SAS token for future export sessions'.

Microsoft acquires Equivio, provider of machine learning-powered compliance solutions

Jan 20, 2015 | Rajesh Jha - Executive Vice President, Office Product Group

I'm pleased to announce that Microsoft has acquired [Equivio](#), a provider of machine learning technologies for eDiscovery and information governance. We are making this acquisition to help our customers tackle the legal and compliance challenges inherent in managing large quantities of email and documents.

Businesses and governments around the world generate enormous volumes of data every day. Sifting through that data to find what is relevant to a legal or compliance matter is costly and time consuming. Traditional techniques for finding relevant documents are falling behind as the growth of data outpaces peoples' ability to manually process it.

Equivio's solution applies machine learning to help solve these problems, enabling users to explore large, unstructured sets of data and quickly find what is relevant. It uses advanced text analytics to perform multi-dimensional analyses of data collections, intelligently sorting documents into themes, grouping near-duplicates, isolating unique data, and helping users quickly identify the documents they need. As part of this process, users train the system to identify documents relevant to a particular subject, such as a legal case or investigation. This iterative process is more accurate and cost effective than keyword searches and manual review of vast quantities of documents. The technology has achieved broad acceptance in the legal community as a valuable eDiscovery tool. Equivio customers include U.S. federal agencies and hundreds of law firms, corporations and other organizations.

Microsoft is serious about providing customers with tools to manage the legal and compliance requirements that are key to responsible business practices. Office 365 includes robust eDiscovery and information governance capabilities today, and we'll use Equivio's machine learning technology to make these vital tools even more intelligent and easy to use in the months ahead. I am extremely excited about the innovative technologies and experienced team we're bringing to Microsoft as we advance this important work.

What is Predictive Coding?

- A combination of human and automated processes in which humans review a subset of documents, the computer analyses those documents and decisions, and then the computer analyses the remaining set of documents and recommends decisions for them.

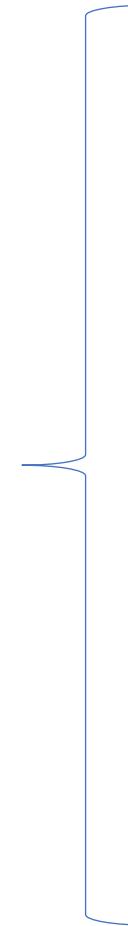

How does it work?

Items copied from live system to review set

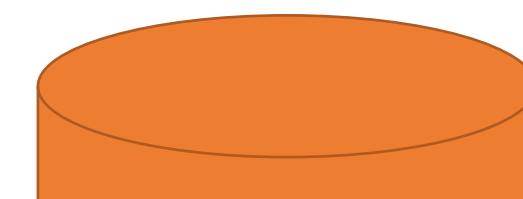

Random sample data
(50 items per round)

Relevant

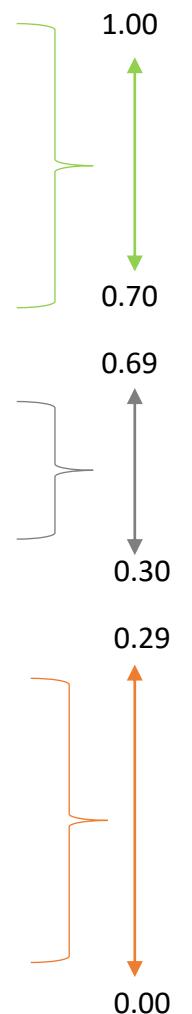

Indeterminate

Not Relevant

Predictive Coding Score

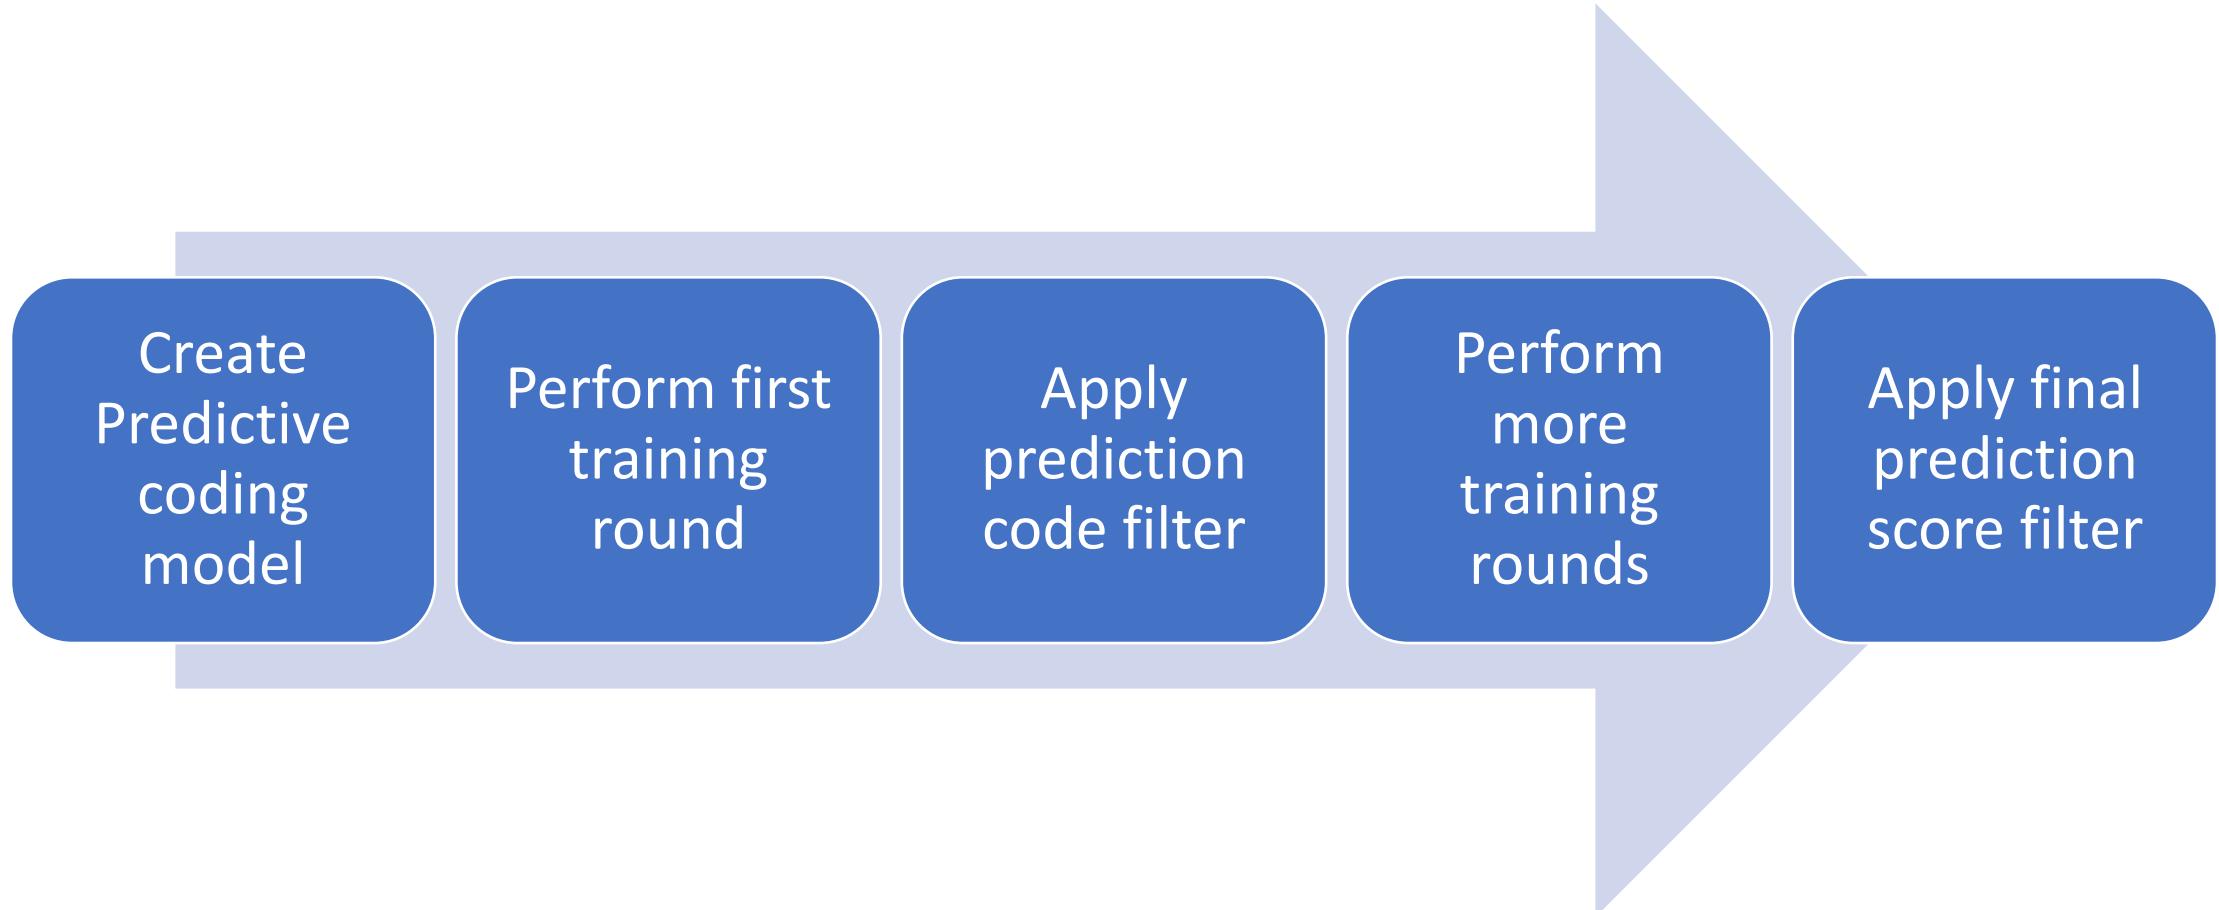

Meta data written to item

F-score ($F\beta$)

- A “simple” calculation of how well your predictive coding is performing calculated as:

$$(1 + \beta^2) \times \text{Precision} \times \text{Recall} \div (\beta^2 \times \text{Precision} + \text{Recall})$$

Create amazing data experiences

Discover value in any data

- Rich integration with Excel
- Ever growing library of free data connectors like Excel, CSV, SharePoint, and Exchange

Personalize reports for your business and KPIs

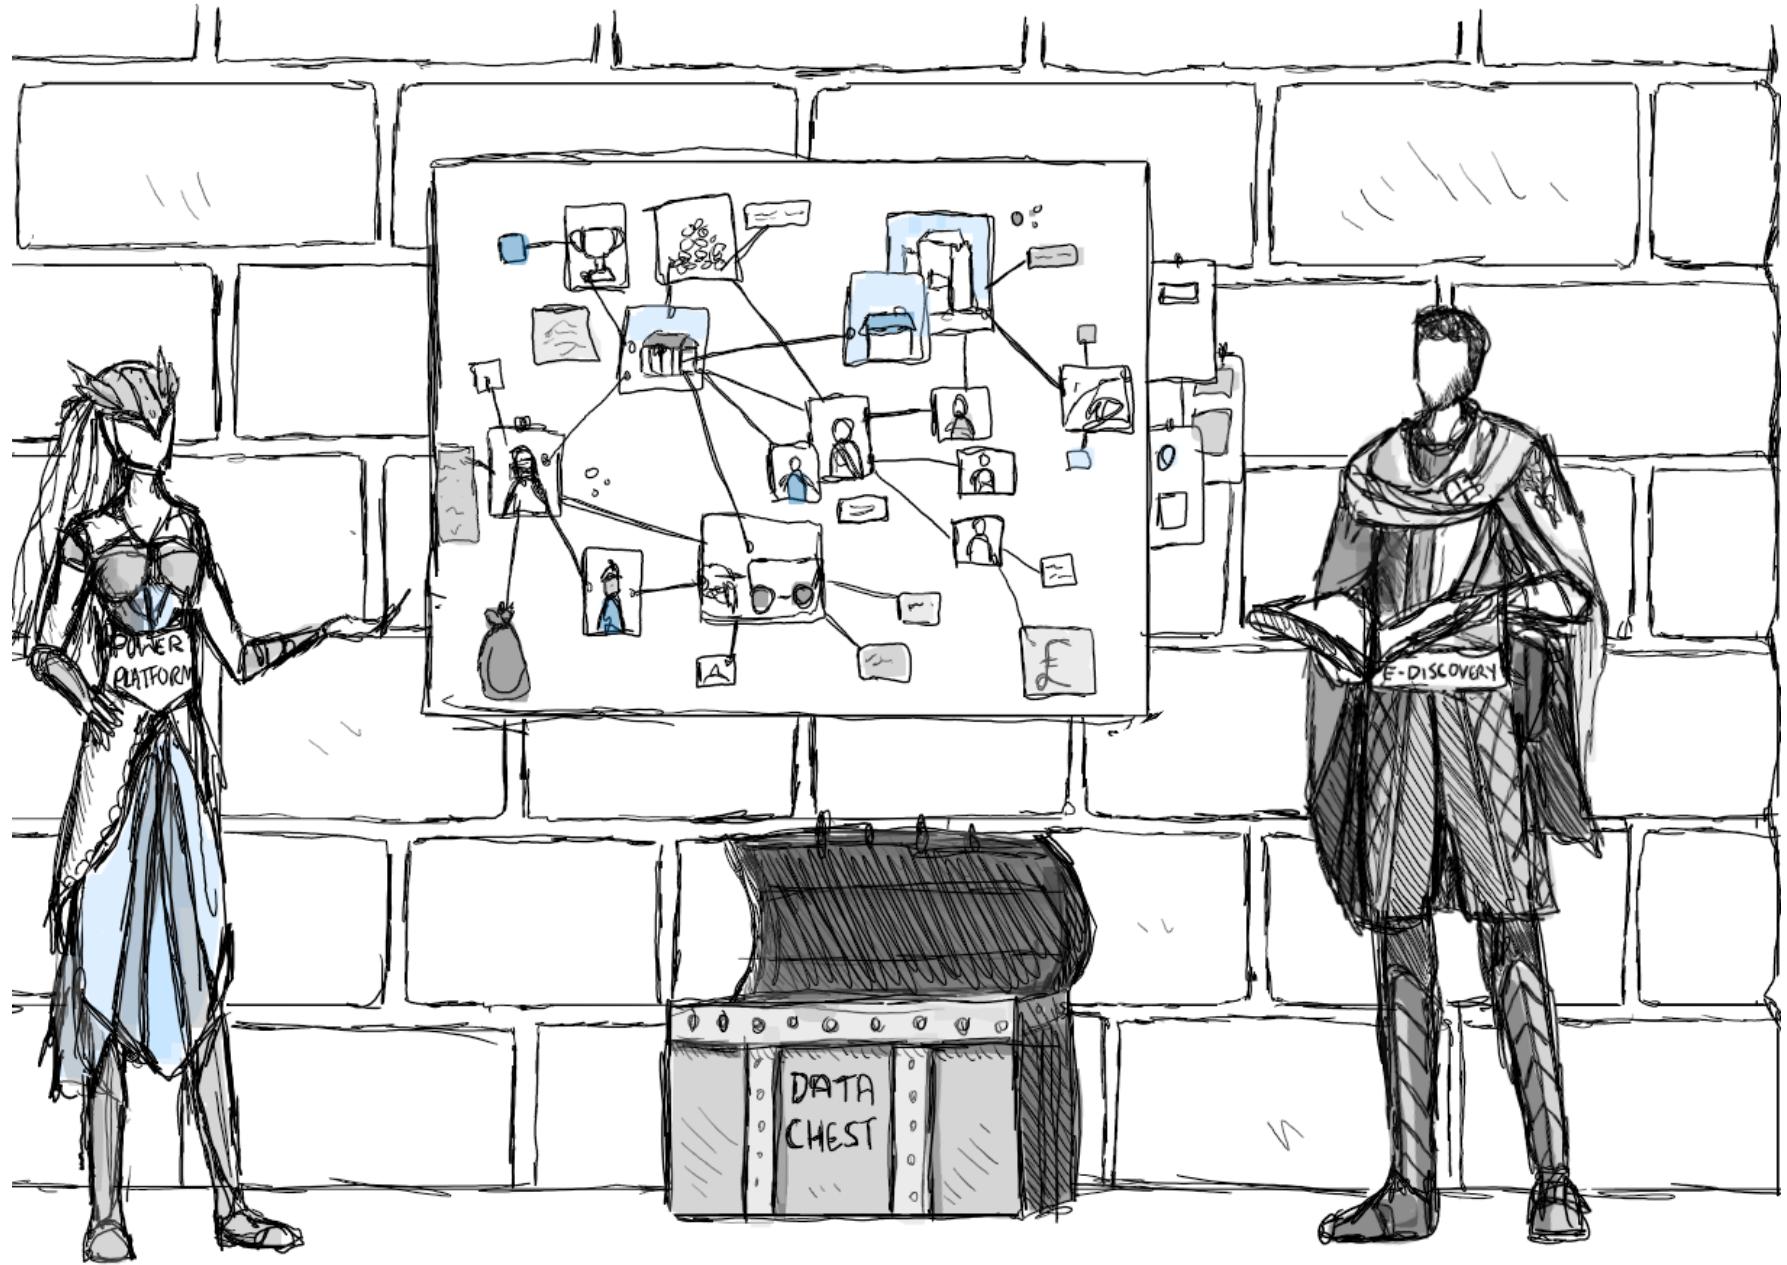

- Hundreds of visualizations and limitless branding options
- Easy to install template apps

Spend less time answering business questions

- Use everyday language to ask your data a question
- Add and tailor dynamic, interactive narratives
- Automatically find anomalies

Demo 1

Power BI data types in Excel

The screenshot shows a Microsoft Excel spreadsheet titled "Excel Demo.xlsx". The ribbon is visible at the top with tabs like File, Home, Insert, Draw, Page Layout, Formulas, Data, Review, View, Help, Power Pivot, and Table Design. The "Table Design" tab is selected. The table has columns labeled "Customer", "Text Description", and "Date Submitted". The "Text Description" column contains various customer feedback entries. The "Date Submitted" column contains dates. The "Customer" column is highlighted with a green background.

| Customer | Text Description | Date Submitted |
|--------------------|--|----------------|
| Lets stop and shop | This isn't working well! I need to get it fixed. | 2/6/2020 |
| North/South | When I press the green button, nothing happens | 2/7/2020 |
| Quick shop | It would be nice to have a search button, so we can quickly perform this task. | 2/6/2020 |
| Santé Gourmet | I ordered green, but I got red. Please fix this urgently. | 2/7/2020 |
| Toms Spezialitäten | The screws were missing. Can you send me the missing items? | 2/6/2020 |
| Seven Seas Imports | Where can I get some help putting this together? The manual isn't very clear. | 2/7/2020 |

At the bottom, there are tabs for "Customer Issues", "Invoice", "PT-Done", "CI-Done", "I-Done", "Sheet1", "Sheet3", and others. The status bar shows "Accessibility: Investigate" and "Power Automate".

Spend less time finding answers

Ask a question with Q&A

Smart narratives

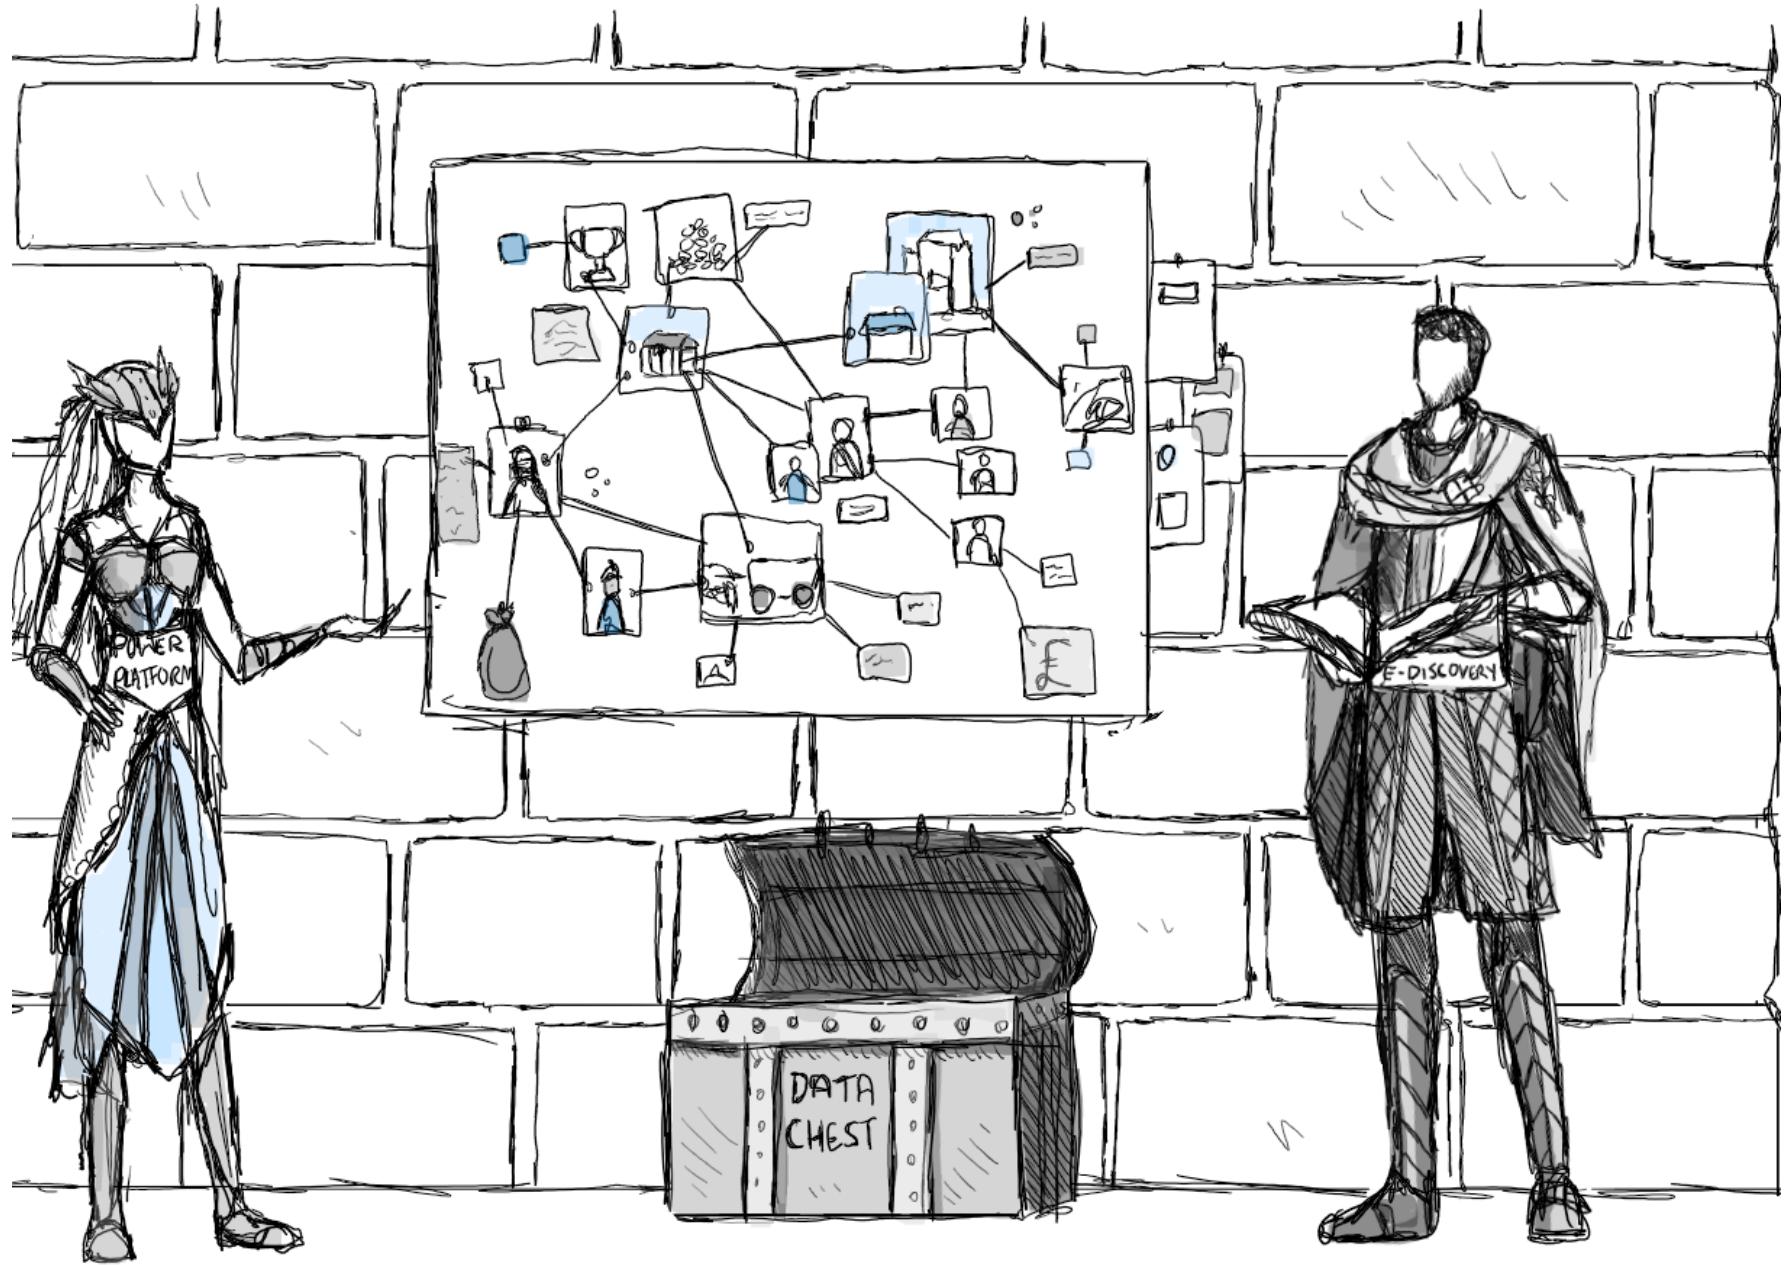

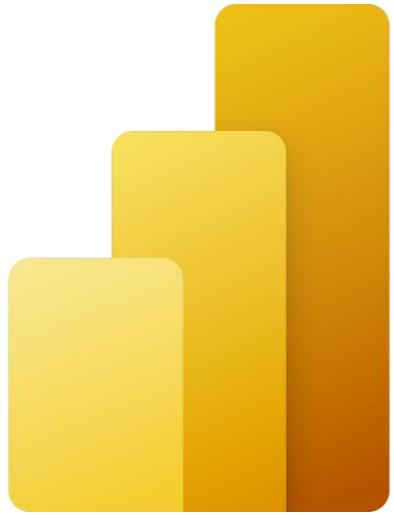

Report authors will be able to add and tailor dynamic, interactive narratives to reports that are automatically generated by Power BI. End users get clear explanations that are continuously updated as they slice and dice the data.

Anomaly detection

Report authors will be able to add enrichments to visualizations to automatically find anomalies based on personalized parameters. Selecting an anomaly will trigger a further analysis that explains the anomaly for the end user. These explanations can be customized by the report author.

End of Demo 1

End to End Protection - Classify, Label and Protect Power BI data

- Data owners set **Microsoft Information Protection** (MIP) sensitivity labels for datasets, reports, dashboards and dataflows.

The screenshot shows the Power BI service interface with the title "Contoso - Finance Department". The left sidebar includes navigation icons for Home, Dashboards, Reports (selected), Workbooks, Datasets, and Dataflows. A search bar at the top says "Search content...". The main area displays a table with two rows:

| NAME ↑ | Sensitivity | ACTION |
|--------------------------------|---------------------|--------|
| Q3 Sales prediction - internal | Highly Confidential | 🔗 🔍 |
| Q3 Sales production - public | General | 🔗 🔍 |

To the right of the table, a modal window titled "Settings for Q3 Sales prediction - internal" is open. It contains the following content:

- "Use the modern visual header with updated styling options." with a toggle switch (on).
- "Change default visual interaction from cross highlighting to cross filtering." with a toggle switch (off).
- Data sensitivity**: A description stating "Data sensitivity labels describe the level of risk and exposure to users of this data".
- A dropdown menu for selecting a sensitivity label, currently showing "Highly Confidential" (highlighted with a yellow border). Other options in the list are "Non-business", "Public", "General", "Confidential", and another "Highly Confidential" entry (highlighted with a blue background).
- Buttons at the bottom right of the modal: "Save" and "Cancel".

| RISK LEVEL | DETECTION TYPE | RISK EVENT TYPE |
|------------|----------------|--|
| High | Offline | User with leaked credential ⓘ |
| Medium | Real-time | Sign-ins from anonymous IP addresses ⓘ |
| Medium | Offline | Impossible travels to atypical locations ⓘ |
| Medium | Real-time | Sign-ins from unfamiliar locations ⓘ |
| Low | Offline | Sign-ins from infected devices ⓘ |

Monitor and control access through integration with Azure AD

THEN

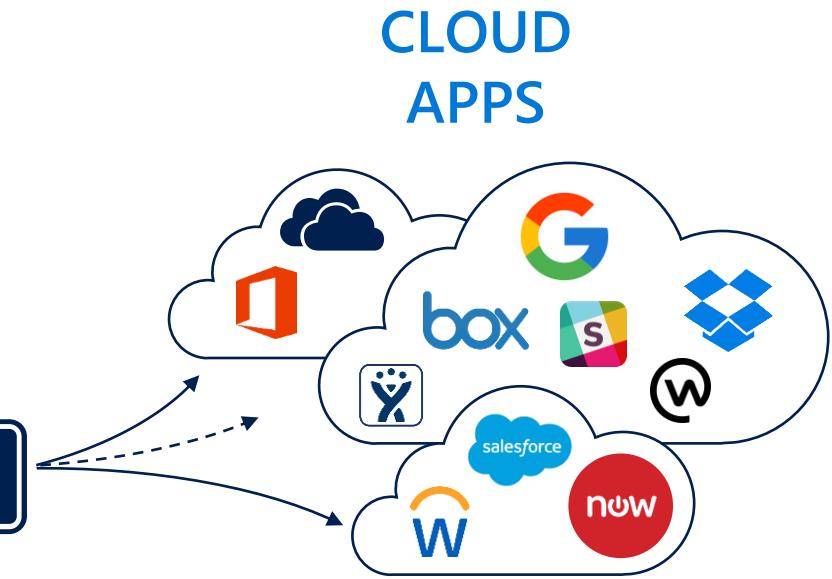

CLOUD APP SECURITY

Proxy

Policy

CONDITIONAL ACCESS APP CONTROL

Context-aware session policies

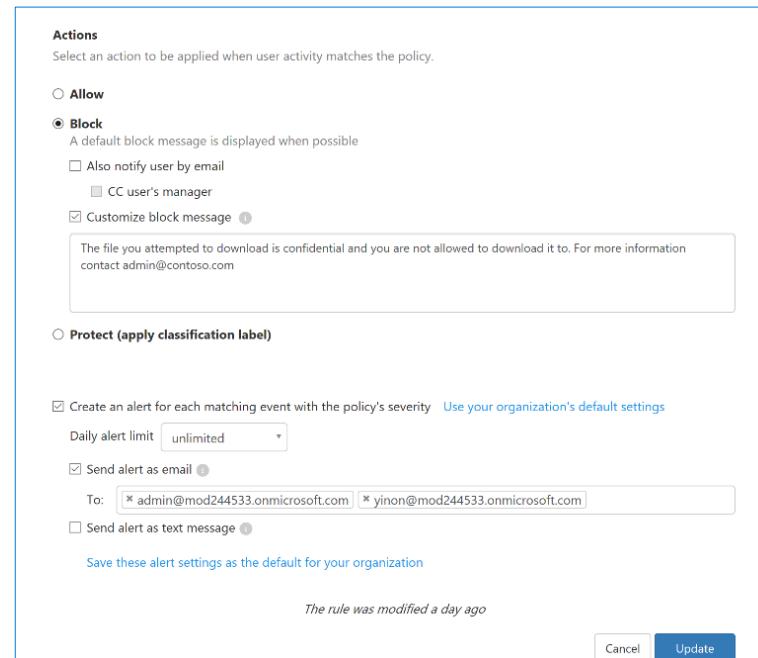

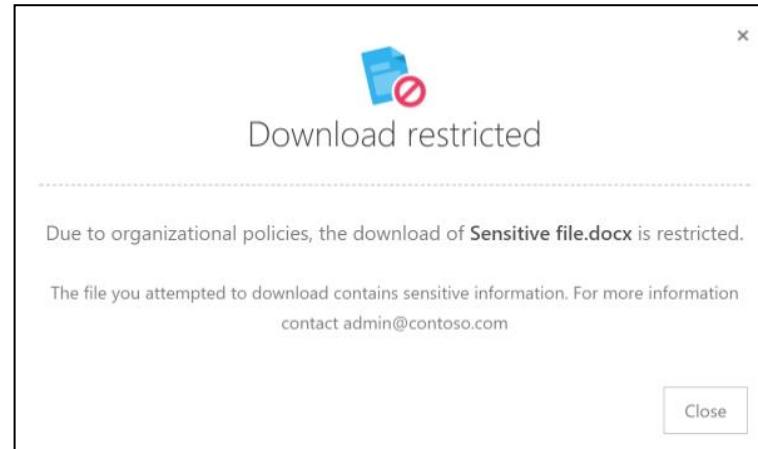

Control access to cloud apps and sensitive data within apps based on user, location, device, and app

Investigate & enforce app and data restrictions

Enforce browser-based “view only” mode for low-trust sessions. Classify, label, and protect on download. Gain visibility into unmanaged device activity.

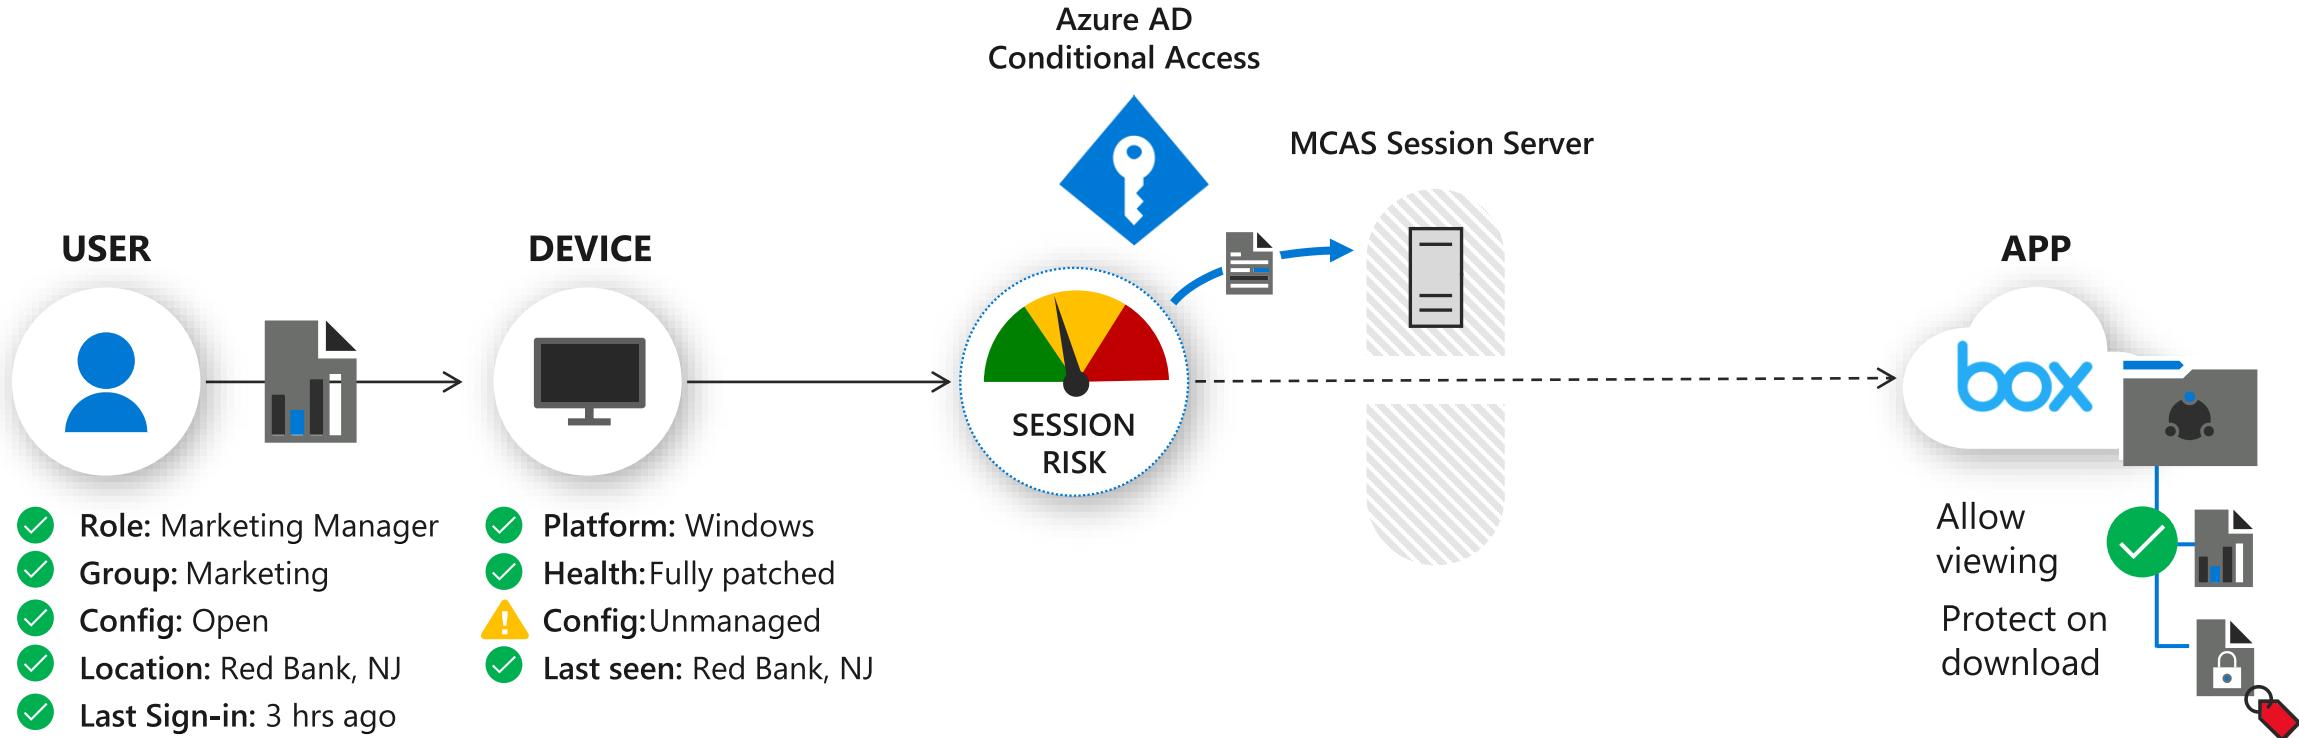

Unique integration with Azure Active Directory

Limit activities performed within user sessions in SaaS apps based on user identity, location, device state, and detected sign-in risk level.

USE CASE: PREVENT DOWNLOAD OF FILES

Risk based in-session controls

⚠️ Device is unmanaged

GSA Office of Governmentwide Policy GSA Policy Advisory: National Guidelines for Assessing and Managing Biological Threats in Federal Mail Facilities December 29, 2003

I. Introduction In October 2001, terrorist contaminated the U.S. mail system with anthrax, resulting in illness and death of federal employees and the public. The threat of similar attacks continues, and other outbreaks have been called to attention by the Centers for Disease Control and Prevention, the U.S. Postal Service, federal agencies, and the public, all of which deal with viruses and suspicious packages. This document provides guidelines for assessing and managing biological threats that might be delivered in the mail.

Documentation

Azure Active Directory offers a range of security features to protect your organization. To learn more, here are some features to start with.

- [Azure AD Conditional Access](#)
- [Azure AD Identity Protection](#)
- [Azure Security Center](#)
- [Identity Secure Score](#)
- [Named locations](#)
- [Authentication methods](#)
- [Multi Factor Authentication \(MFA\)](#)

Security guidance

For a strong security posture, we recommend the following:

- [5 steps to secure your identity infrastructure](#)
- [Azure AD Password Guidance](#)
- [Azure AD Data Security Whitepaper](#)
- [How Password Hash Sync \(PHS\) works](#)

Deployment guides

To deploy the above features in your organization, check out [Azure AD deployment plans](#).

Protect

- Conditional Access
- Identity Protection

Remove from navigation

Sensitivity labels are used to classify email messages, documents, sites, and more. When a label is applied (automatically or by the user), the content or site is protected based on the settings you choose. For example, you can create labels that encrypt files, add content marking, and control user access to specific sites. [Learn more about sensitivity labels](#)

Edit sensitivity label

- Name & description
 - Scope
 - Files & emails
 - Groups & sites
 - Privacy & external user access
 - External sharing & devices
 - Azure Purview assets (optional)
 - Finish

Define external sharing and device access settings

Control who can share SharePoint content with people outside your organization and decide whether users can access labeled sites from unmanaged devices.

Control external sharing from labeled SharePoint sites

When this label is applied to a SharePoint site, these settings will replace existing external sharing settings configured for the site.

Content can be shared with

- Anyone ⓘ
Users can share files and folders using links that don't require sign-in.
 - New and existing guests ⓘ
Guests must sign in or provide a verification code.
 - Existing guests ⓘ
Only guests in your organization's directory.
 - Only people in your organization
No external sharing allowed.

Use Azure AD Conditional Access to protect labeled SharePoint sites

You can either control the level of access users have from unmanaged devices or select an existing authentication context to enforce restrictions.

- Determine whether users can access SharePoint sites from unmanaged devices (which are devices that aren't hybrid Azure AD joined or enrolled in Intune).
 - For this setting to work, you must also configure the SharePoint feature that blocks or limits access to SharePoint files from unmanaged devices. [Learn more](#)
 - Allow full access from desktop apps, mobile apps, and the web
 - Allow limited, web-only access ^①
 - Block access ^①
 - Choose an existing authentication context (preview). Each context has an Azure AD Conditional Access policy applied to enforce restrictions. [Learn more about authentication context](#)

FY22 Sales Plays – Security (Security, Compliance, Identity + Management)

| Business Objectives | # | Sales Plays | Sales Plays Summary | Hero Product |
|---|----|--|--|------------------------------------|
| Security (SCI-M) Expand Existing Expanding \$ per customer with premium solutions in M365 and cross selling Azure Acquire New Grow new SCI-M customers Dream Big Reach untapped opportunities | 1. | Build Zero Trust foundations | Drive upsell (O to M) with foundational zero trust capabilities in EMS. Increase 3 rd party app usage on AAD as cross-cloud identity platform and Microsoft-managed cross-platform endpoints. Azure Active Directory/MEM | AAD MEM |
| | 2. | Modernize security and defend against threats | Drive Microsoft Defender (M365 & Azure Defender) for end-to-end security with Sentinel as SIEM to modernize security operation center. Microsoft Defender/Azure Sentinel | Microsoft Defender, Sentinel |
| | 3. | Secure Azure, hybrid & multi-cloud <small>New</small> | Attach Security to Azure infrastructure and secure hybrid and multi-cloud Azure Defender/Azure Network Security/MCAS | Azure Defender, Network Security |
| | 4. | Protect and govern sensitive data <small>New</small> | Drive information protection, data loss prevention and governance in E5 compliance to help customers manage their sensitive data E5 Compliance/Azure Purview | Microsoft IP+G, DLP, Azure Purview |
| | 5. | Manage and investigate risks <small>New</small> | Help customers identify and mitigate internal risks and manage compliance E5 Compliance/Compliance Manager | Insider risk, Advanced eDiscovery |

What you can co-sell

All solutions, apps, and services offerings are ready to co-sell with Microsoft across all solution areas and industry scenarios.

Business Applications

Solutions built on Dynamics 365 or Power Apps. Co-sell through the Business Applications ISV Connect program.

Applications & Infrastructure/ Data & Artificial Intelligence

Solutions built on Azure. Co-sell through the IP Co-sell program.

Modern Work & Security

Solutions built on Microsoft 365 or Security. Co-sell through commercial marketplace AppSource.

Microsoft Solutions

Partners sell/resell Microsoft technology through their own sellers.

Services Co-sell

Sellers/partners collaborate to sell a partner's project/managed services with Microsoft technology embedded.

IP Co-sell

Sellers/partners collaborate to sell a partner's repeatable, packaged IP solution.

Selling another partner's solution

Partners sell/resell another partner's offer or solution to the customer.

When you publish a transactable offer in the commercial marketplace

| You can | Your customers can | Microsoft sellers can |
|--|--|---|
|  Engage customers, channel partners, and Microsoft sellers to drive your offer |  Put your offer on the Microsoft price list to gain global distribution |  Discover thousands of top solutions compatible with Microsoft products |
|  Leverage Microsoft's existing procurement relationships and consumption commitments |  Benefit from the trusted expertise of Microsoft and its partner ecosystem |  Try and buy with confidence: Each solution passes security and compatibility testing |

Everyone benefits even more with IP Co-sell

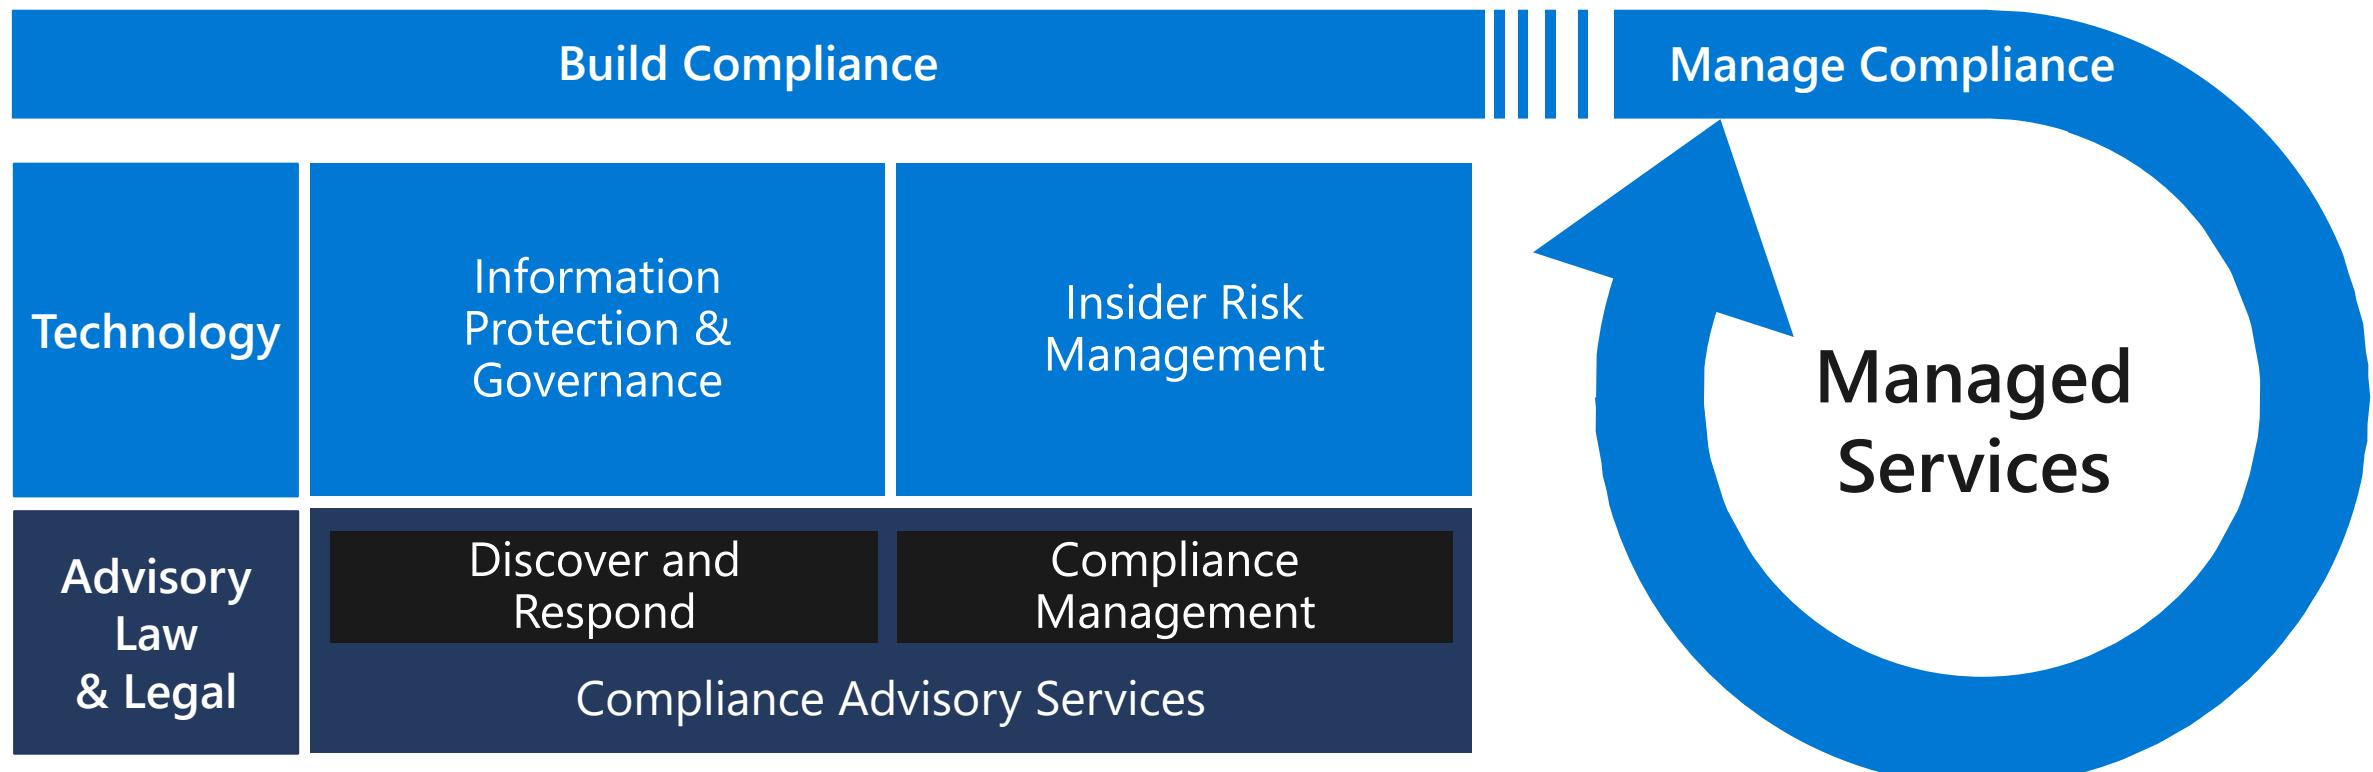

| | | | | |
|--|---|--|--|---|
|  Unlock fee reductions, bringing the fee from 20% to 10% for IaaS & SaaS |  Save time with simplified Azure IP Co-sell deal reg for marketplace wins |  Count third-party software toward a customer's consumption commitment via marketplace |  Count on full Azure IP Co-sell support for marketplace wins |  Drive EA/MCA deals with MACC credit, custom prices, terms, and software images |
|--|---|--|--|---|

The Compliance Partner Opportunity

| Compliance Manager | Microsoft Information Protection | DLP in Teams | Microsoft Information Governance | Insider Risk Management | Communications Compliance | Advanced eDiscovery | Advanced Audit |

Microsoft Partner Network Programs

Security Competency

Silver Status

Individual Certification Requirements

1 Individual in MS-500 (M365 Security Administration)
OR

AZ-500 (Azure Security Technologies)

Demonstrated Customer Performance

1000 Active Users in M365 security workload
OR
US \$500/month Azure customer consumption within previous 12 months

BENEFITS
Internal use rights for M365
Co-marketing MPN benefits

Gold Status

Individual Certification Requirements

4 individuals in MS-500 (M365 Security Admin)
AND

4 individuals in AZ-500 (Azure Security Technologies) (can also be same person)

Demonstrated Customer Performance

4000 Active Users in M365 security workload
OR
US \$1000/month Azure customer consumption within previous 12 months

BENEFITS
Internal use rights for M365
Usage incentive eligibility
ECIF & Customer matching prioritization
Co-marketing MPN benefits

Advanced Specializations

- Identity and Access Management
- Threat Protection

Information Protection and Governance

Previous deployments

Certified individuals

Third-party technical audit/customer references

New Partner Demo Tenants

Microsoft Security, Compliance, Identity Virtual Hub

At Microsoft, we've reimagined security, identity, and compliance. We provide frictionless security, identity and compliance that you can rely on, so you can be free to go further, faster.

Our intelligent solution is built to empower you and your business, keeping you resilient and agile. It integrates across platforms, clouds, and services, and helps you automate common tasks so you can focus your time on the most important work. Explore the [SCI virtual hub](#) learn more about Microsoft's security, identity, and compliance solutions.

Security

Microsoft's security solutions empower security teams to do more with intelligent capabilities, delivers industry-leading protection, and streamlines integration for comprehensive coverage. Explore these resources to learn how Microsoft can help stop attacks and safeguard your multi-cloud resources.

Compliance

Explore these resources and learn how to intelligently assess your risks, govern and protect sensitive data, and effectively respond to regulatory requirements.

Identity

Embrace secure access for a connected world with Microsoft identity and access management services, and build a strong foundation for a Zero Trust security model. Explore these resources to learn how you can secure your workforce, maintain productivity, and protect against threats.
